

Plasmid DNA Description:

The synthetic gene Igni_1263 was assembled from synthetic oligonucleotides and/or PCR products. The fragment was cloned into pMA-T using SfiI and SfiI cloning sites. The plasmid DNA was purified from transformed bacteria and concentration determined by UV spectroscopy. The final construct was verified by sequencing. The sequence congruence within the used restriction sites was 100%. See the accompanying data sheets for sequences and find the original ABI trace files as well as the assembled sequences electronically on disk. 5 µg of the plasmid preparation were lyophilized for shipping.
