

Plasmid DNA Description:

The synthetic gene Igni_1263 was assembled from synthetic oligonucleotides and/or PCR products. The fragment was cloned into pRSET_A_A185 using NheI and NcoI cloning sites. The plasmid DNA was purified from transformed bacteria and concentration determined by UV spectroscopy. The final construct was verified by sequencing. The sequence congruence within the used restriction sites was 100%. See the accompanying data sheets for sequences and find the original ABI trace files as well as the assembled sequences electronically on disk. 5 µg of the plasmid preparation were lyophilized for shipping.

Plasmid Map:

Quality Assurance Documentation: 13ABGM3C

Ref. No.: 1363434

Designation: E.coli K12 (dam+ dcm+ tonA rec-)

Gene name: Igni_1263

Gene size: 948 bp

Vector backbone: pRSET_A_A185

Cloning sites: NheI / NcoI

Quantity: ~5 µg Plasmid DNA

Note: Please dissolve lyophilized DNA in 50 µl distilled water or 10 mM Tris-HCl (pH 8.0). We recommend sequence verification after each transformation step.

Date: 5 July 2013
