

Figure S3.5 | Root hair morphology of T-DNA lines of ARO3 interaction partners.

(A) and **(B)** Morphology of wild-type and *aro2 aro3-1* double knockout root hairs. **(C)** and **(D)** No altered root hair morphology is observed in the single T-DNA insertion lines *rhogap/ph-1* (SALK_11590) and *exo70e2-1* (GABI_072F12). **(E)** The T-DNA insertion line *rhd3-7* (SALK_106309) shows an increased number of short and wavy root hairs as already described by Stefano et al. (2012).
