

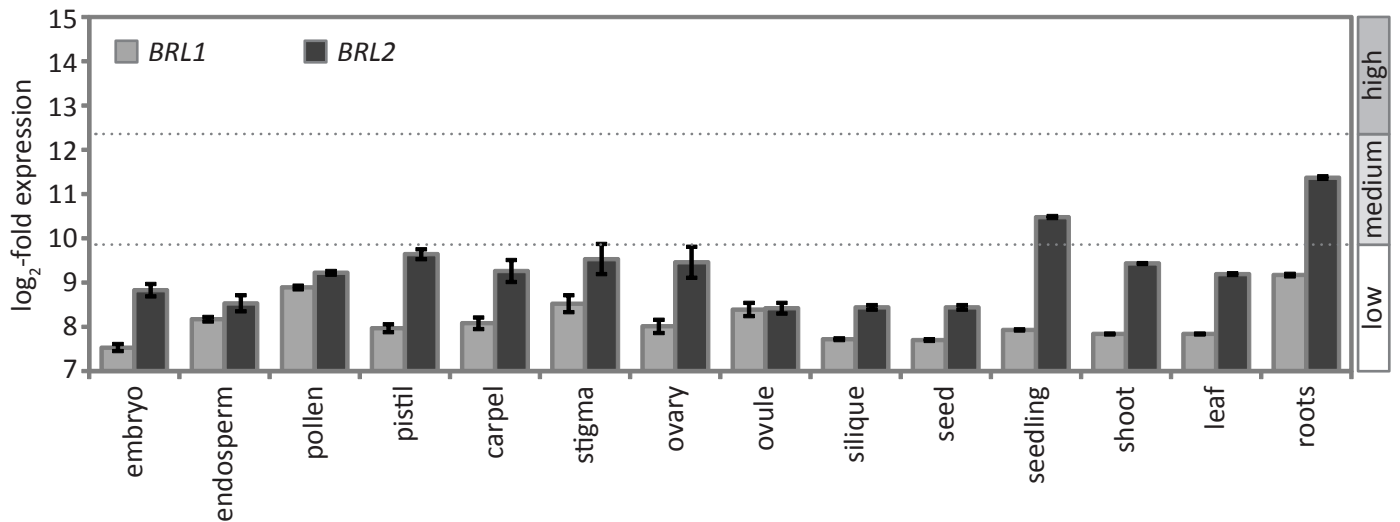

Figure S4.2 | *BRL1*-like (*BRL*) receptor kinases with BR binding activity have low expression values in reproductive tissues.

Expression of *BRL1*-like 1 (*BRL1*) (light gray) and *BRL2* (dark gray) in different reproductive and non-reproductive tissues. Log₂-fold expression values and gene expression levels displayed relative to the signal intensity on the 22k ATH1 array according to the GENEVESTIGATOR microarray database (Zimmermann et al. 2004). Number of samples used for calculating mean values $\pm$ 1SE: embryo, 38; endosperm, 11; pollen, 52; pistil, 29; carpel, 2; stigma, 3; ovary, 4; ovule, 2; silique, 372; seed, 323; seedling, 2330; shoot, 4504; leaf, 2849; roots, 1063.
