

# Modernizing the Database Information System (DBIS) for Global Collaboration

Cooperative Management of Scholarly Databases

is part of the UR Library Services, a product family that also includes the Electronic Journals Library (EZB) and the Regensburger Verbundklassifikation (RVK). These services have been provided by the University Library of Regensburg, Germany, for decades.

Cooperative Management of Electronic Journals

- Information on more than 116,000 e-journals in all subject areas, including 79,000 freely available titles
- Convenient administration of institution-specific licenses and central management of journal packages and collections
- High quality and topicality of EZB data through cooperative collaboration, plus numerous export options
- Uniform access to e-journals and their full texts via institution-specific user interfaces in German and English
- Traffic light icons visualize accessibility in participating institutions
- Institution-specific availability check via EZB Linking Service
- Various nationwide services for academic literature and information supply

Cooperative System for Knowledge Indexing

- Classification for systematic indexing of holdings in academic libraries and institutions
- Suitable for subject indexing and listing, for institutions of any size, for open access and stacks holdings
- Academic topicality through cooperative further development
- Convenient search in RVK-Online
- Integration of all information in the RVK web portal and knowledge management in MediaWiki
- Networked with regional and nationwide library catalogs and services, e.g. GND
- Largest classification network in the German speaking area with an English version currently in progress
